PROFESSIONAL SUMMARY

Final-year Computer Science undergraduate and Smart India Hackathon 2023 Finalist with hands-on experience building end-to-end data pipelines following Medallion Architecture. Proficient in Python, PySpark, and SQL with strong knowledge of data engineering tools including Airflow, dbt, and Docker. Passionate about building scalable, production-ready data systems.

EDUCATION

- **Bachelor of Technology - Computer Science and Engineering - Data Science** 2022–2026
Maharana Pratap Engineering College, Kanpur
- **Intermediate (Class 12) - PCM** 2021–2022
Kendriya Vidyalaya No.1 A.F.S. Chakeri, Kanpur
- **High School (Class 10)** 2019–2020
Kendriya Vidyalaya No.1 A.F.S. Chakeri, Kanpur

PROJECTS

• IPL Analytics Pipeline 🔄

Technologies Used: Python, PySpark, Airflow, dbt, Amazon S3, PostgreSQL, Docker, Looker Studio

- Built an end-to-end data pipeline following **Medallion Architecture (Bronze → Silver → Gold)**, ingesting **283,678 ball-by-ball IPL records** (2008–2025) from Kaggle API into Amazon S3 as a partitioned data lake, with PySpark handling large-scale cleaning and transformation into PostgreSQL.
- Designed **dbt Gold layer** models covering top batsmen, bowlers, team performance, and season trends; orchestrated the full pipeline via **Airflow** daily DAG, containerized with Docker Compose, and monitored using Grafana.

• Distributed Log Analysis & Anomaly Detection Pipeline 🔄

Technologies Used: Python, Spark, Hadoop, Linux

- Engineered a scalable ETL pipeline using **Spark** and **Hadoop (HDFS)** to process and analyze **29GB of server logs**, automating the detection of system anomalies and errors.
- Optimized data processing latency using Spark RDDs for in-memory computation, reducing log analysis time by **40%** compared to traditional sequential processing.

• Tornet Granted - Enumeration of Hidden Servers 🔄

Technologies Used: Python, Flask, BeautifulSoup, Tor, SQLite

- Developed a recursive graph traversal engine using Python and Tor proxy to navigate .onion networks, targeting deep-web nodes not indexed by public directories, with a differential validation engine to isolate and health-check unlisted active servers.
- Built a DOM extraction module using BeautifulSoup to scrape and store metadata from verified hidden services in SQLite, enabling structured security analysis of discovered nodes.

TECHNICAL SKILLS AND INTERESTS

Languages: Python, Java, SQL

Data Engineering: Airflow, dbt, PySpark, Spark, Hadoop, Amazon S3

Databases: PostgreSQL, MySQL

Algorithm Design: Data Structures and Algorithms

Tools & Platforms: Git, GitHub, Docker, Linux (Debian), Postman

CERTIFICATIONS

- Python For Data Science from **NPTEL by IIT Madras**
- Data Analytics with Python from **NPTEL by IIT Roorkee**

ACHIEVEMENTS

- **Finalist, Smart India Hackathon (SIH) 2023:** Selected for the Grand Finale of India's largest national hackathon, competing against **400+ teams** with a solution for enumerating hidden servers on Tor-based networks.
- **Ranked Top 5, Code-o-Fiesta 2.0:** Secured top 5 out of **300+ participants** in a competitive coding contest organized by MPGI, Kanpur.
- **Hackathon Finalist:** Qualified in multiple national-level hackathons including **HackIndia24 (Spark 7)** and **Ace Hack 4.0** under strict time constraints.
